Cellular respiration coloring worksheet answers pdf answers key pdf

Grade Level: 8-10 Time Required: 25-30 minutes Download PDF Google Doc Key (TpT) HS-LS1-5 Use a model to illustrate how photosynthesis transforms light energy into stored chemical energy. I use this worksheet with my advanced biology class to break down the chemical steps of cellular respiration. This resource can easily be paired with a lesson, textbook reading, or serve as a review. Please note that this diagram does not include FAD/FADH. If you are looking for a hands-on experience with photosynthesis, Carolina sells a kit to make algae beads that react to light. HS-LS1-6 Construct and revise an explanation based on evidence for how carbon, hydrogen, and oxygen from sugar molecules may combine with other elements to form amino acids and/or other large carbon-based molecules. This does require some advance preparation. Students can also do a photosynthesis virtual lab which requires no set-up or materials. Shannan Muskopf June 15, 2018 This worksheet was designed for freshman level biology because I found their very old textbook was not written in a way that made photosynthesis easy to understand. Students read short text passages and then color images to help them relate the textual information with the graphic. They color an image of a leaf with outlines the reactants and products and then color a chloroplast which includes stacks of thylakoids where the reaction takes place. Text and coloring image are followed by specific questions that students can answer by carefully reading the passages and examining the image. (Their textbook is not needed for this exercise.) Students will need to have some knowledge of cellular respiration to answer a question about the relationship between photosynthesis and respiration. I also have a coloring / reading worksheet for cellular respiration. This worksheet does not go into detail about the light dependent and light independent reactions, though I do have a coloring worksheet that covers these reactions that I use with the second year biology students. I use this worksheet with my advanced biology class to break down the chemical steps of cellular respiration. Shannan Muskopf June 15, 2018 This worksheet was designed for freshman level biology because I found their very old textbook was not written in a way that made photosynthesis easy to understand. Students read short text passages and then color images to help them relate the textual information with the graphic. They color an image of a leaf with outlines the reactants and products and then color a chloroplast which includes stacks of thylakoids where the reaction takes place. Text and coloring image are followed by specific questions that students can answer by carefully reading the passages and examining the image. (Their textbook is not needed for this exercise.)
